

3-6 Month Internship – Junior AI and Full Stack Developer

Travel Tech Startup

Hands-on role building the Timary ecosystem – an AI-powered platform focused on healing through travel.

Responsibilities

- **AI Engine Development:** Assist in training and refining the Psychographic Mapping Engine using Large Language Models (LLMs) to categorize user "stress profiles" and match them to "Restorative Density" travel locations.
- **AGI "Travel Buddy" Features:** Develop the "During Trip" ad-hoc task manager with real-time AI logic to handle travel changes (e.g., flight delays, weather shifts).
- **Automated Content Pipeline:** Work on the "After Trip" AI Media Editor – implement APIs to automatically stitch user photos/videos into cohesive "Identity Quest" digital memories.
- **B2B API Infrastructure:** Build and document Resonaire™ API endpoints for future licensing to corporate travel partners

Technical Requirements

- **Languages:** Proficiency in Python (AI/Backend) + JavaScript/TypeScript (React Native or Flutter for mobile).
- **AI/ML:** Basic knowledge of Prompt Engineering, Fine-tuning LLMs (OpenAI/Anthropic APIs), and vector databases (Pinecone, Milvus).
- **Backend & Cloud:** Familiarity with Node.js and basic cloud infrastructure (AWS or Google Cloud).
- **Data Handling:** Solid understanding of complex data structures for interrelated travel data (locations, timelines, sentiments).

Soft Skills Requirements

- **Traveler Mindset:** Deep understanding of why people travel – this is a healing tool, not just another booking app.
- **Scrappy Innovation:** Ability to find creative solutions with limited resources in a lean startup environment.
- **Documentation Discipline:** Clean, well-documented code is essential (targeting HKSTP milestones and B2B licensing).

To apply, please email your CV to len.nguyen@wiseemployment.com.hk with your name and job title "Junior AI and Full Stack Developer Intern" in the subject line.
